

TICK-TEST

Tick-borne infection analysis: Lyme disease, TBEV, Ehrlichiosis and other infections

How to proceed:

1. Carefully remove the tick from the skin and disinfect the bite location.
2. Place the tick in the sealable plastic bag.
3. Send it to our laboratory for analysis. We detect with high validity and sensitivity pathogens presence in the tick and the possibility of infection transmission.

Shipping address:

Parazitology, Protean s.r.o., Dolní 2102/2, České Budějovice 370 04, Czech Republic

Indicate the required analyses:

Borreliosis	€ 22	<input type="checkbox"/>	Babesiosis	€ 22	<input type="checkbox"/>
TBEV	€ 29	<input type="checkbox"/>	Bartonellosis	€ 22	<input type="checkbox"/>
Ehrlichiosis	€ 22	<input type="checkbox"/>			

Payment please via money transfer – please indicate your telephone number or e-mail address!.

In the case of **positive result** consult further care with your physician.

In the case of **negative result** there exists a very little chance infection transfer. However, you should carefully observe any possible symptoms as an disease development cannot be completely excluded.

I agree with above mentioned conditions and declare to cover the corresponding costs.
